

Direzione generale della sanità animale e dei farmaci veterinari

9th JPC-REMESA Meeting Electronic prescription of veterinary drugs in Italy

Dr Benedetta Cappelletti, DVM
General Directorate for Animal Health And Veterinary Medicines
Ministry of Health
Larnaca (Cyprus) 9-10 December 2019

New electronic system for traceability of VMPs

Objectives:

- Controlling of the supply chain for VMPs.
- Monitoring of the consumption of medicines
- Data on the real consumption of VMPs
- Improving public health protection
- Improving pharmaco-surveillance and health risk analysis (AMR)
- Simplifying burocracy (i.e. no more obligations on traceability, automatic compiling of forms and registers, etc.]

Traceability of VMP - TRACCIAVET

2013

 Adaptation of model and the rules for feeding the Central Databank (CDB) on specificities of VMPs

2015

Pilot project on the veterinary electronic prescription

2019

E-prescription mandatory starting from 16
 April 2019

New electronic system for traceability of VMPs

- The Electronic Veterinary prescription replaces the paper form the entire national territory
- It represents an important modification of the previous organizational and operational model for the management of veterinary medicines.
- The new system does not introduce new obligations or additional rules with respect to the current legislative norms but reduces the obligations recovering the information from data already available, in the ministerial information systems.

New electronic system for traceability of VMPs

- E-prescription is also for pets
- This new operating method allows the veterinary to prescribe repeatable and non repeatablef medicines in a single prescription.

• Once issued by the veterinarian, the e-prescription online and can be traced using the respective identification number and PIN code.

Veterinary e-prescription

Stakeholders involved are:

- Wholesalers (authorized for retail sale)
- Pharmacies and Para-pharmacies
- ❖ Feed mills
- Private Veterinarians
- Veterinary Servicies of Regions and Local Competent Authorities
- ❖ Animal Keepers and/or Owners

Prescription and issuing

1

Owner/Keeper of animals

Il veterinarian communicates univocal number of prescription and PIN

Vets

The veterinarian fills in and issues a digital prescription

The central IT system assigns an univocal number and a PIN for validation

the breeder/ holder communicates the prescription number and PIN to pharmacist.

the pharmacist delivers prescribed medicines

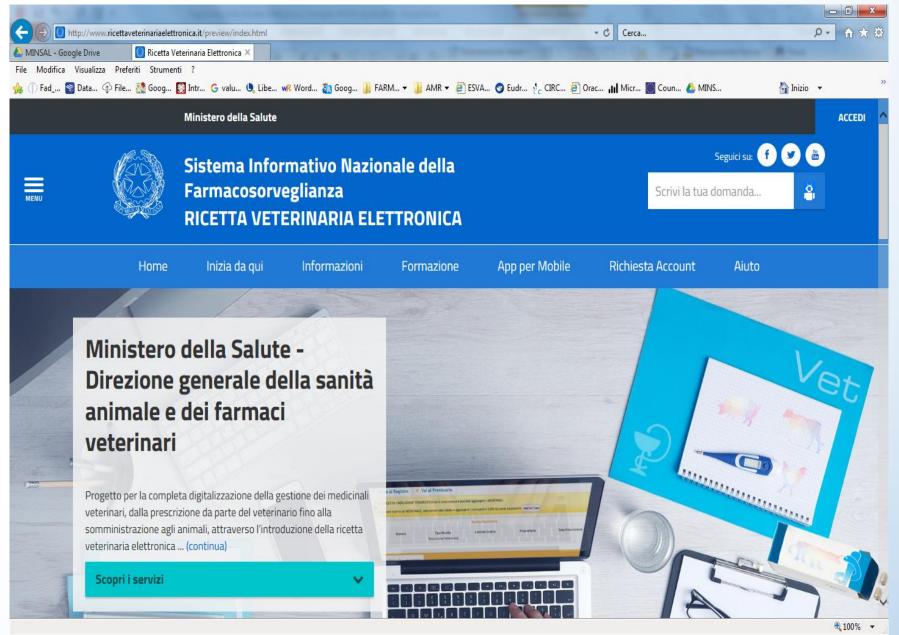

Pharmacist

La ricetta veterinaria elettronica è un'innovazione voluta dal ministero della Salute per completare il sistema per la tracciabilità dei medicinali veterinari e dei mangimi medicati. Realizzata in collaborazione con l'Istituto Zooprofilattico Sperimentale dell'Abruzzo e del Molise, rende possibile la completa digitalizzazione della gestione dei medicinali veterinari, dalla prescrizione da parte del Veterinario fino alla ULTERIORI INFORMAZIONI
