

## Group work 1

### Hazard identification AMR in a specific system

- 
- An underwater photograph showing a vibrant coral reef on the left side, with numerous small, colorful fish swimming around it. In the center and right, a larger, dark-colored fish is swimming towards the right. The water is clear and blue, with some bubbles visible on the right side.
- Setting: Tilapia farm
  - Frame the risk question/scope of analysis
  - Identify hazards

# considerations

- Are we considering resistant specific bacteria
- Resistant to what antimicrobial?
- Acquired in the farm/from environment
- Are we talking about resistance genes/resistome
- Are we talking risk for the live fish or
- AMR risk to consumers by consumption of food products or
- Both?

**Important to frame the risk question and title it correctly**
