for Animal Health

# Launch of the Regional Aquatic Animal Health Laboratory Network for Africa (RAAHLN-AF)

5 – 7 December 2023 Pretoria, South Africa

## INSTM's contribution as a National Laboratory for diagnosis of AA diseases and food security: Monitoring the health and sanitary quality of aquatic organisms in TUNISIA

*Nadia Chérif, PhD, HDR*

*Aquatic Animal Disease team*

*Aquaculture Laboratory*

*INSTM Focal point for sanitary surveillance network of AA*

*Member of the AU-IBAR AAH Expert Group*

*Responsible of the pathology and biosecurity TAG GFCM/FAO*

*Tunis, Tunisia*

*Tel: 0021652557705      Fax: 0021671735848*

*Email: nadia.cherif@instm.rnrt.tn*

# 1- INTRODUCTION TO INSTM

World Organisation  
for Animal Health

Ministry of Agriculture and  
Environment

Republic of Tunisia

Institution of Agricultural  
Research and Higher Education

# INSTITUT NATIONAL DES SCIENCES ET TECHNOLOGIES DE LA MER

28 Rue 2 Mars 1934 Carthage Salammbô

Tel: 00216 71 730420 - 71 730548; Fax: 00216 71 732622

Launch of the Regional Aquatic  
Animal Health Laboratory Network for Africa (RAAHLN-AF)

5 - 7 December 2023 Pretoria, South Africa

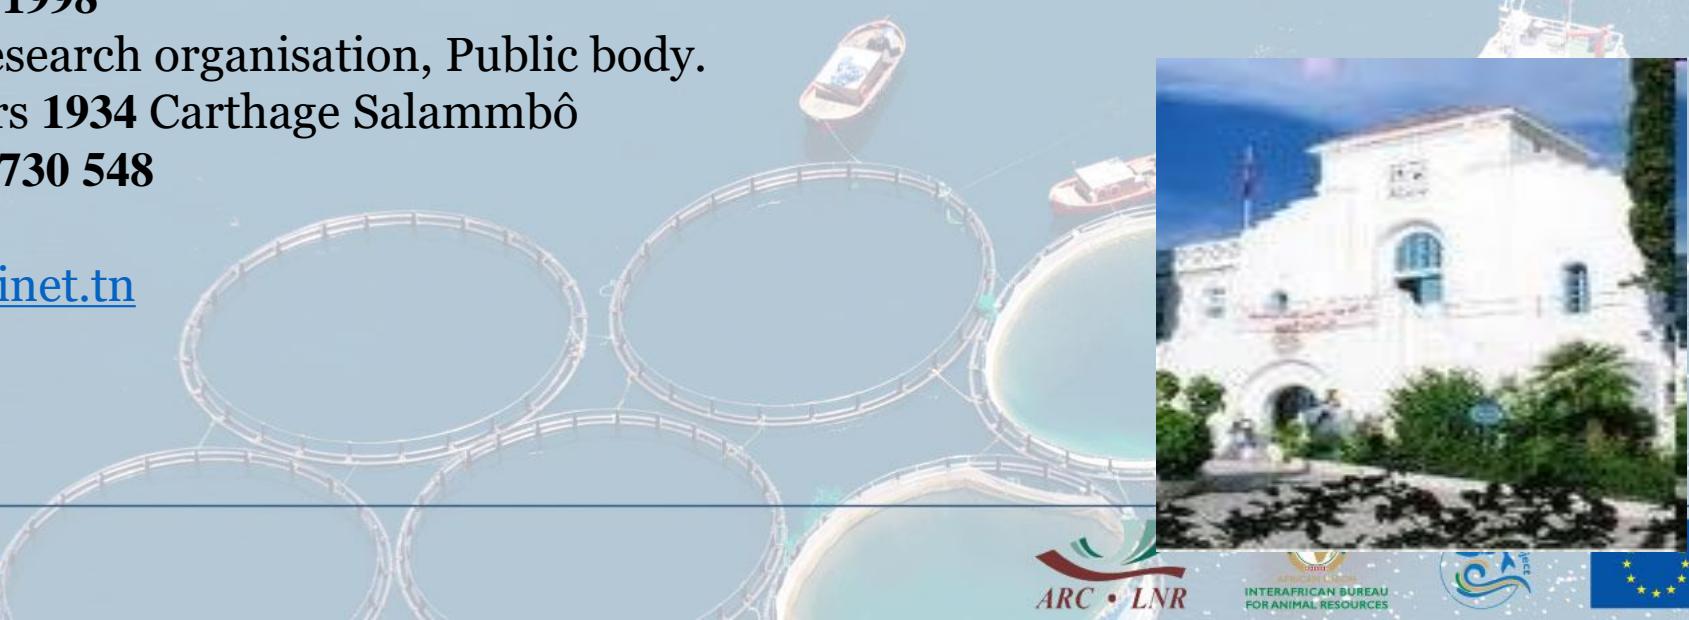

# History

✓ Foundation : 1924

- 1924 – 1956: Salammbô Oceanographic Station (SOS)
- 1956 – 1992: Institut National Scientifique et Technique d'Oceanographie et de pêche
- 1992 - on going: Institut National des Sciences et Technologies de la Mer (INSTM)

- ✓ Date of Registration : 11/30/1998
- ✓ Legal Status : Non profit, Research organisation, Public body.
- ✓ Main address : 28 Rue 2 Mars 1934 Carthage Salammbô
- ✓ Tel : (00216) 71 730 420 – 71 730 548
- ✓ Fax : (00216) 71 732 622
- ✓ Web : <http://www.instm.agrinet.tn>

World  
Health  
Organization

## The INSTM different centers location

### ➤ 9 active centers

- Salammbo
- Khéridine
- La Goulette
- Monastir
- Mahdia
- Sfax
- Béchima
- Zarzis
- Tabarka

To establish effective lanes for providing **scientific advice** and Transfer its **know-how and** the results of its research to **decision-makers** and marine professionals and scientists.

To **perform and promote research** in the fields of processing technology, marine seafood safety, fishery economics, and fishery technology

To foster public awareness of wide-ranging topics on the functioning and **rational utilization of marine ecosystems** with special emphasis on sustainable fisheries and the ecosystem approach to fisheries management issues.

## INSTM Mission

### On the scientific level:

- Carry out contract **research programs** in areas directly or indirectly linked to the sea and its resources.
- Participate in various national, regional and international **networks** related to the sea.
- Contribute to the **dissemination** of marine culture and public **awareness** of the protection and preservation of the sea and its biodiversity.

### Contribute to university education:

Supervision of doctoral master's students and end-of-study projects and preparing them for professional life

### Contribute to the development of the economic and social fabric:

- Carry out specific studies for investors and provide the necessary technical information
- Carry out laboratory analyzes in the specialties of the institute within the framework of national networks
- The organization of scientific and technical events to publish and promote research results and their evaluations

INSTM

## ORGANIGRAMME ACTUEL DE L'INSTM

Avec les entités accréditées (**ScQ**) et celles qui s'apprêtent pour l'accréditation (**Scc, SPT, SMVP, SMVB, SHP**)

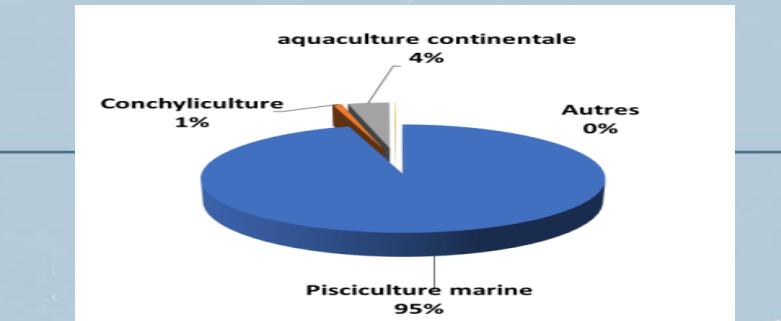

## 2- CURRENT STATE OF AQUACULTURE IN TUNISIA AND PROBLEMS LINKED TO AQUACULTURE PATHOLOGIES

- Tunisia occupies a central place in the Mediterranean
- widely open to the sea, especially on its eastern and southern shores
- The coastline +1300 km,
- The national maritime domain of 80,000 km<sup>2</sup>,
- 105,200 hectares of lagoons
- 20,000 hectares of freshwater bodies (dams and hillside lakes).
- 4.66 billion m<sup>3</sup>/year of usable water (42% groundwater).

Launch of the Regional Aquatic Animal Health Laboratory Network for Africa (RAAHLN-AF)

5 - 7 December 2023 Pretoria, South Africa

-  Marine fish farming:
  - 20761T (95%)
  - 25 fermes
-  Fresh water Aquaculture :
  - 811T (4%)
  - 32 barrages
  - 6 fermes pour l'élevage du Tilapia (30T)
-  Shellfish farming:
  - 183 T (1%)
  - 8 fermes
-  Seaweed farming:
  - 7 projets
  - 13 T Spiruline sèche
-  Shrimp farming:
  - Projet pilote *Penaeus vannamei*
  - 2 T

# Main fresh fish species in Tunisian dams

## MULET (*Mugil cephalus*)

## BARBEAU (*Barbus Callensis*)

## SANDRE (*Sander lucioperca*)

## CARPE (*Cyprinus carpio*)

## GARDON (*Rutilus rubilio*)

## BLACK BASS (*Micropterus salmoides*)

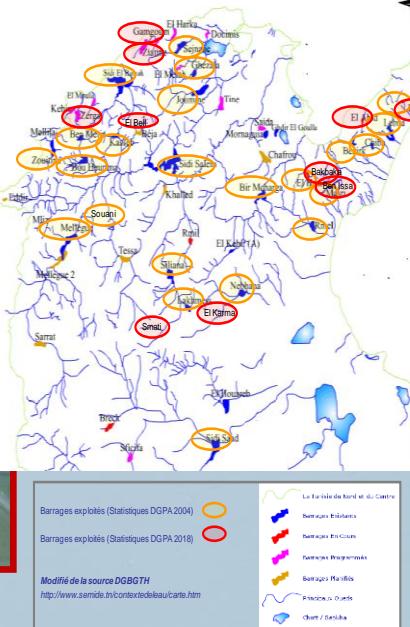

## TILAPIA (*Oreochromis niloticus*)

## ROTENGLER (*Rutilus rubilio*)

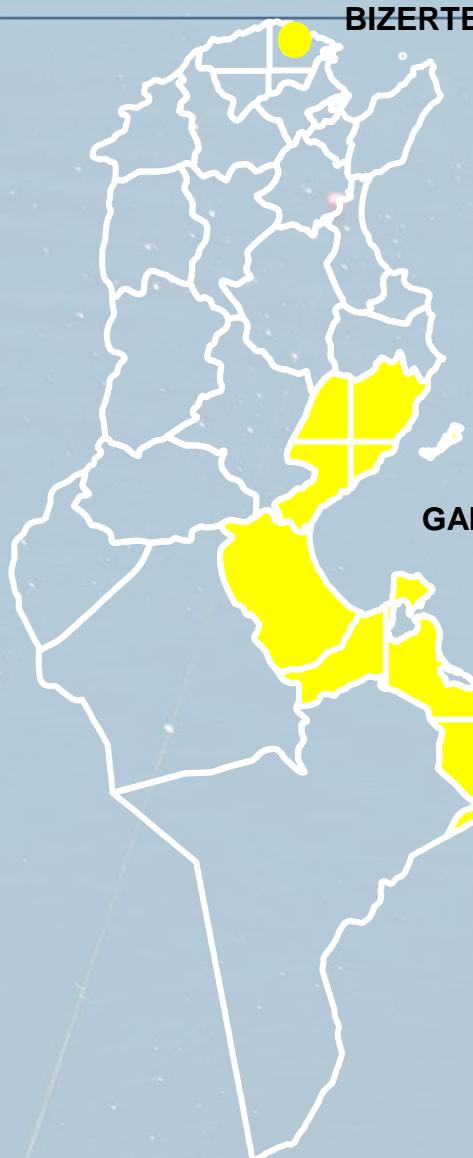

## ANGUILLE (*Anguilla anguilla*)

## FARMING SYSTEMS AND PRACTICES

### Extensive/Non-Fed Aquaculture

- 1- Official control at the level of MBV Production zones
- 2- Official control of MBV purification centers

Mussels  
*Mytilus galloprovincialis*

Oysters  
*Crassostrea gigas*

Clams (*Ruditapes decussatus*)

# Intensive/Fed aquaculture systems:

## Intensive / Fed Aquaculture

Marine aquaculture

Fresh water aquaculture

Marine finfish farming  
(Floating cages,  
Raceways)

Bluefin Tuna fattening  
(Floating cages)

Shrimp farming (Raceways)

Tilapia farming (Raceways)

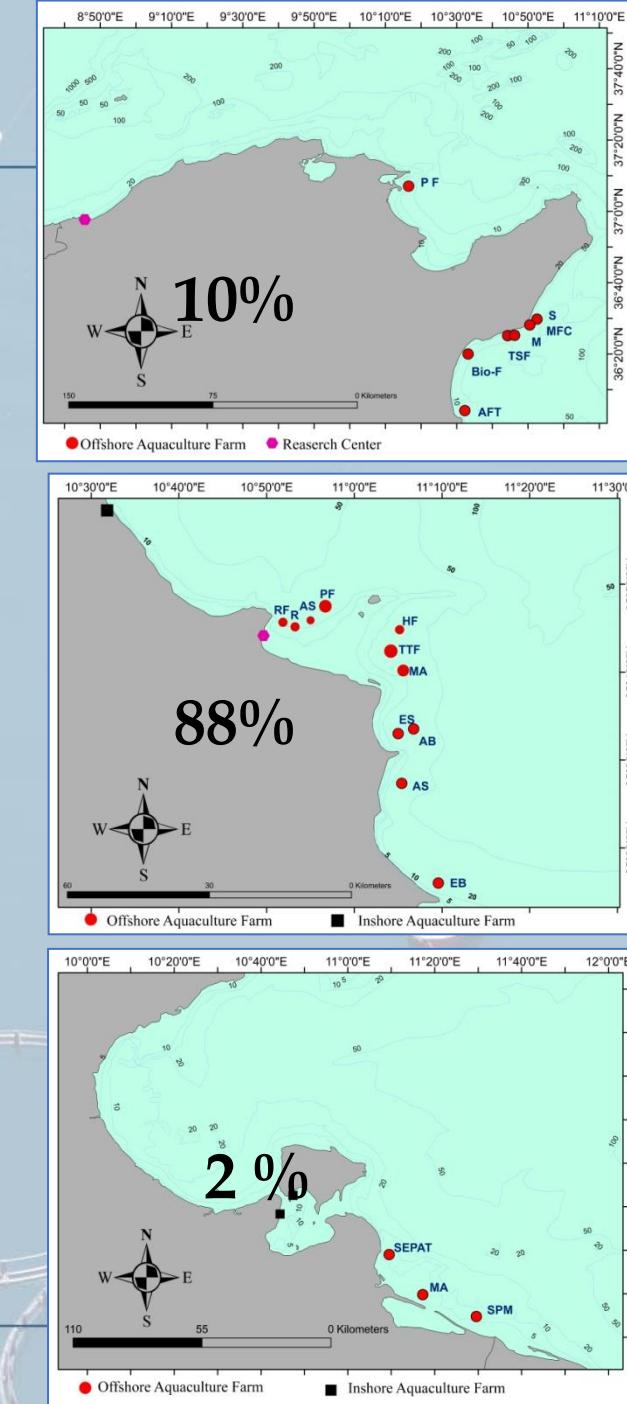

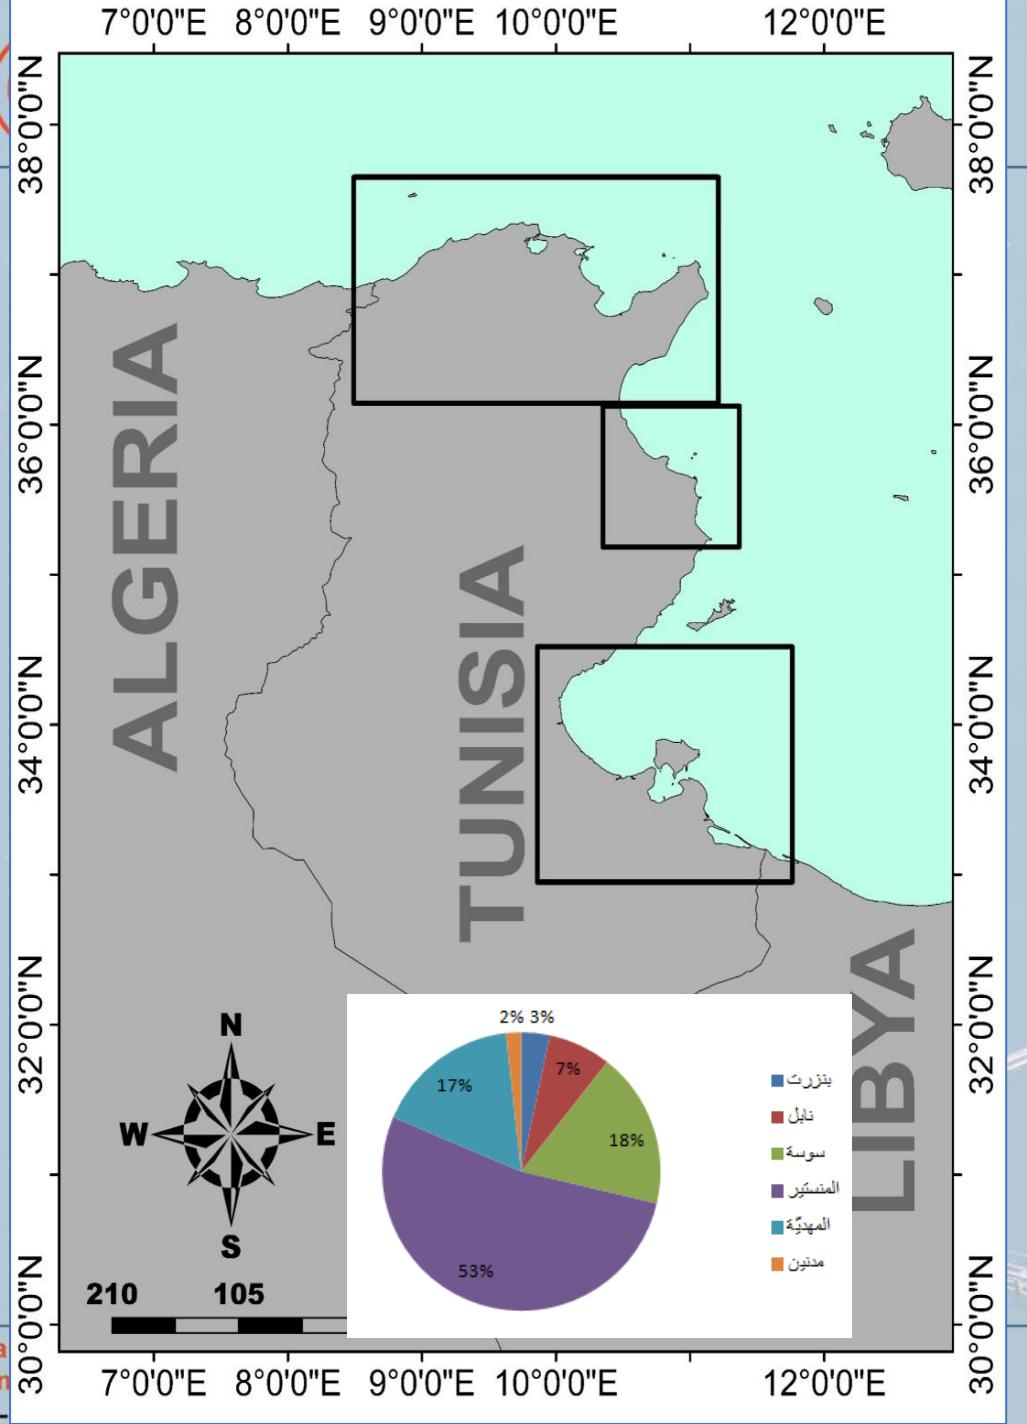

Seabass, Seabream,  
Meagre

*Thunnus Thunnus*

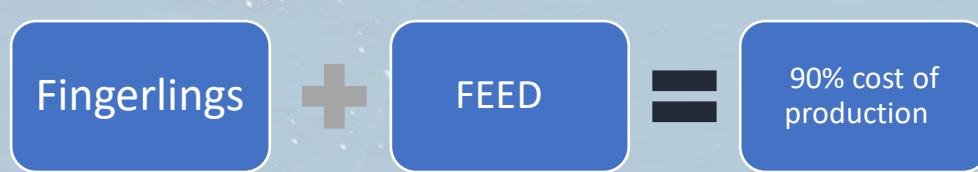

*Penaeus vannamei*

Nile Tilapia, Red Tilapia

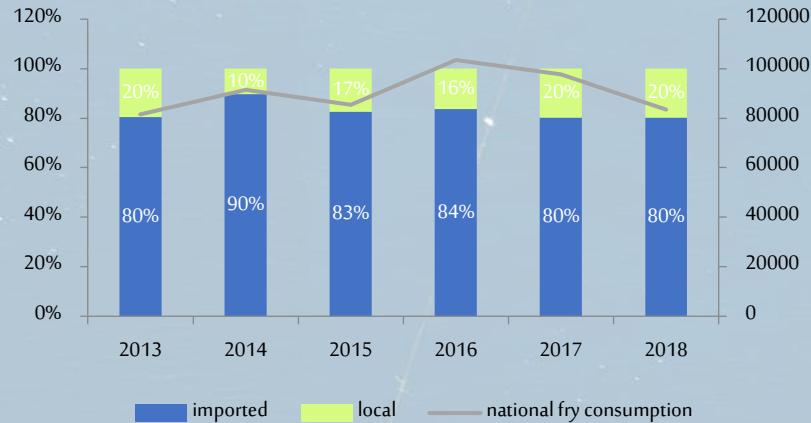

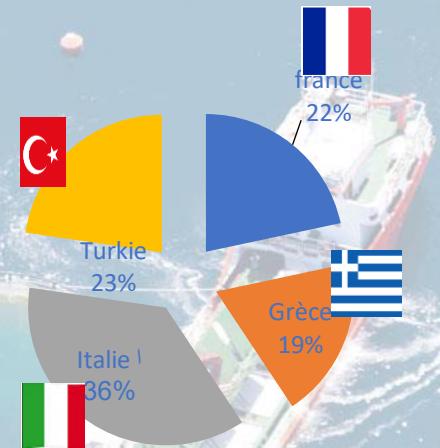

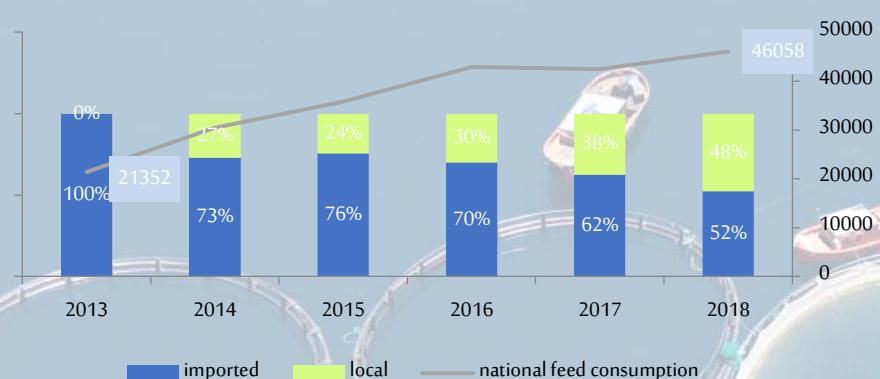

## Marine finfish farming main inputs

Evolution de la consommation d'alevins 2013-2018

Evolution de la consommation d'aliment 2013-2018

- 2 local hatcheries & 2 feed units

# 3- DIAGNOSTIC LABORATORY CAPACITY AT INSTM: MONITORING OF SANITARY AND AQUACULTURE LINKED PATHOLOGIES

# OFFICIAL CONTROL (WOAH + EU STANDARDS)

## NATIONAL SURVEILLANCE NETWORK OF BIVALVE MOLLUSCS/FISH AT INSTM

### General Organization

- Monitoring parameters
  - \*Sanitary Network
  - \*Sampling areas and sites
  - \*Techniques and location of analyzes  
(REMI, REPHY, REBY, RECNO and REVI (shellfish))
  - \*Zoosanitary Network  
(REZOM, REVI (fish))

**Regional Veterinarians (CRDA)**  
**Samples collection**

*Sampling and transmission*

Created in 1995

*Results communication*

**INSTM Laboratories**  
**Samples analysis**

*Results transmission*

**General Directorate of Veterinary Services: DGSV  
(Competent authority)**  
**Centralization, extension of results, transfer and export authorization**

## Analyzes requested from INSTM labs as part of the official control of seafood and MBV

Matrice	Analyse demandée	Méthode exigée	Exigence qualité	Prix unitaire en DT
Poissons	La recherche du virus de la septicémie Hémorragique Virale (VSHV)	RT-PCR en temps réel  (Manuel des maladies des organismes aquatiques, OMSA 2021)	Système assurance qualité en cours	200
Poissons	La recherche du virus de la nécrose hématopoïétique infectieuse (VNHI)	RT-PCR en temps réel  (Manuel des maladies des organismes aquatiques, OMSA 2021)	Système assurance qualité en cours	200
Poissons	Analyse Histamine	ISO 19343: 2017 (Fr) , HPLC, Chromatographie	Accréditée selon la norme ISO/CEI 17025:2017	90
Poissons	Analyse ABVT	Méthode interne  validé accréditée (Ruiz-Capillas et al. 1999 ; Système FIA)	Accréditée selon la norme ISO/CEI 17025:2017	45
Eau	Numérotation et identification des phytoplanctons toxiques dans l'eau de mer	Méthode d'Uthermol	En cours d'accréditation	93
Mollusques Bivalves	Norovirus et virus de l'hépatite A dans les MBV  Herpes virus	RT-PCR en temps réel , ISO 15216-1:2017  -	Laboratoire sous assurance qualité	700
Mollusques Bivalves	La recherche de la maladie de la perkinsose	Méthode qualitative :Histologie  Coupes histologiques de tissus de mollusques colorés à l'hémalum-éosine« Manual of Diagnostic Tests for Aquatic Animals» de l'OIE	Laboratoire sous assurance qualité	92
Mollusques bivalves	Analyse DSP	NFEN16024: 2013 validée  accréditée Par LCMS/MS	Accréditée selon la norme ISO/CEI 17025:2017	350
Mollusques bivalves	Analyse ASP	Méthode interne validée  Accréditée Par LCMS/MS	Accréditée selon la norme ISO/CEI 17025:2017	350
Mollusques bivalves	Analyse PSP	Méthode interne validée  Accréditée Par LCMS/MS	Accréditée selon la norme ISO/CEI 17025:2017	200
Mollusques bivalves	Analyse TMA	Méthode interne validée accréditée  (FIA)	Accréditée selon la norme ISO/CEI 17025:2017	45

Numbering and identification of toxic phytoplankton in seawater

## ***PHYTOPLANCTON: Méthodes et seuils limites***

**méthode:** quantitative sous microscope inversé

**Interprétation des résultats:**

✓ **Situation normale:** absence d'espèces toxiques

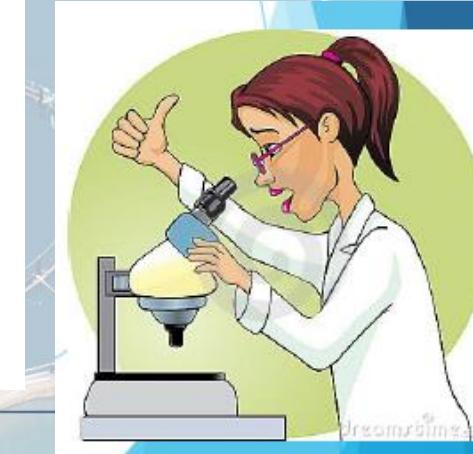

✓ **Situation de surveillance:** présence d'espèces toxiques en quantité inférieure à la concentration critique

✓ **Situation d'alerte:** présence d'espèces toxiques en quantité supérieure à la concentration critique

**Karenia**

**Alexandrium**

# REVI (MBV)

Depuis 2014

Recherche de Norovirus et virus de l'Hépatite A dans les MBV

## *Norovirus et virus de l'hépatite A : Méthodes et seuils limites*

- Méthode:** RT-PCR  
ISO/TS15216.2013
- Interprétation des résultats:** résultat positif si présence

- Europe pas de réglementation spécifique :Règlement (CE) n° 178/2002 (Articles 7 et 14):
  - Principe de précaution
  - Produit dangereux

# Recherche de la bio toxine lipophiles « DSP »

Depuis 2019

La méthode de référence pour la recherche des Lipophiles:  
LC-MS/MS (NFEN16024 :2013)

Texte règlementaire de l'(UE): N°15/2011 de la  
commission de 10 Janvier 2011

Accréditation de ce paramètre à l'INSTM  
(Lab B3Aqua (en 2019))

# REseau Zoosanitaire des Mollusques (depuis 2005)

## REZOM

Parasites protozoaires

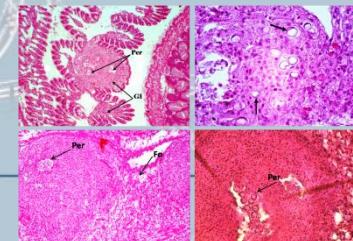

Exp: *Marteilia sp.*,  
*Bonamia sp.)*  
*refringens,*

Exp: *Perkinsus sp*

Caractérisation et identification du parasite  
*Perkinsus sp.* Par l'Histologie selon  
OIE/EU

## **Initiation for the establishment of a National Aquatic Animal Health Network**

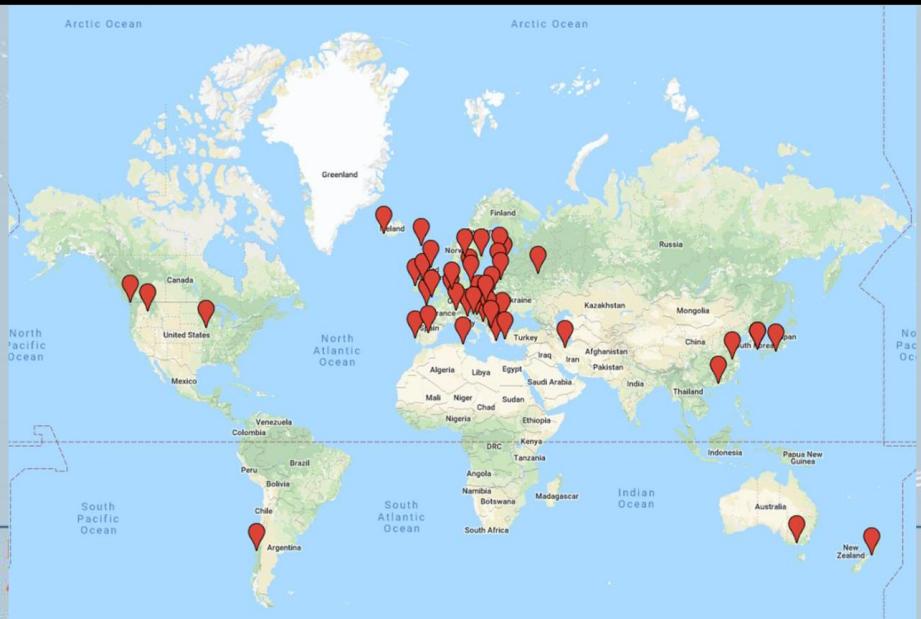

In accordance with the requirements of memorandum n°200/2930 of 12/19/2019 published by the Ministry of Agriculture (Director General of Veterinary Services), establishing the national surveillance program for viral hemorrhagic septicemia (SHV) and infectious hematopoietic necrosis (IHN) in farmed marine fish: REVIP since 2020

قرار من وزير الفلاحة والموارد المائية والصيد البحري  
مؤرخ في 31 جويلية 2017 يتعلّق بضبط الشروط الصحية  
لألصناف المائة.

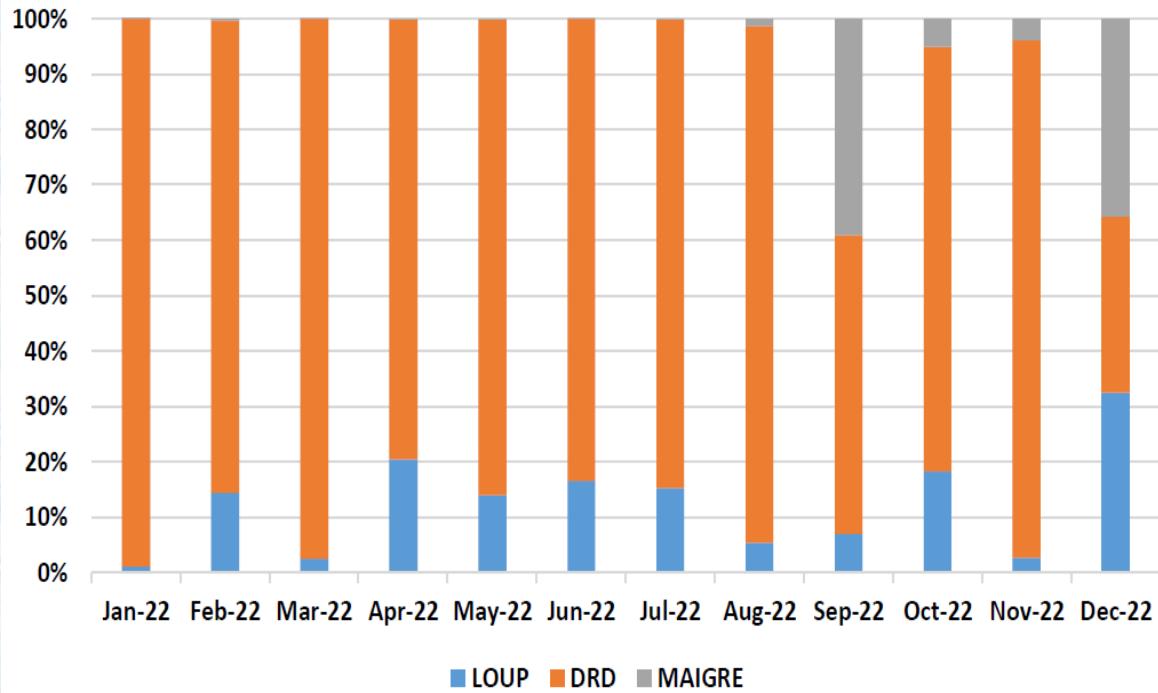

More than 6,000 specimens were received from 21 aquaculture farms and more than 300 analyses/company were carried out by the INSTM Fish Virology Laboratory.

# Self Freedom declaration based on a Target surveillance

# OTHER ECONOMIC IMPORTANT DISEASES:

## MONITORING OF MARINE FISH PATHOGENS

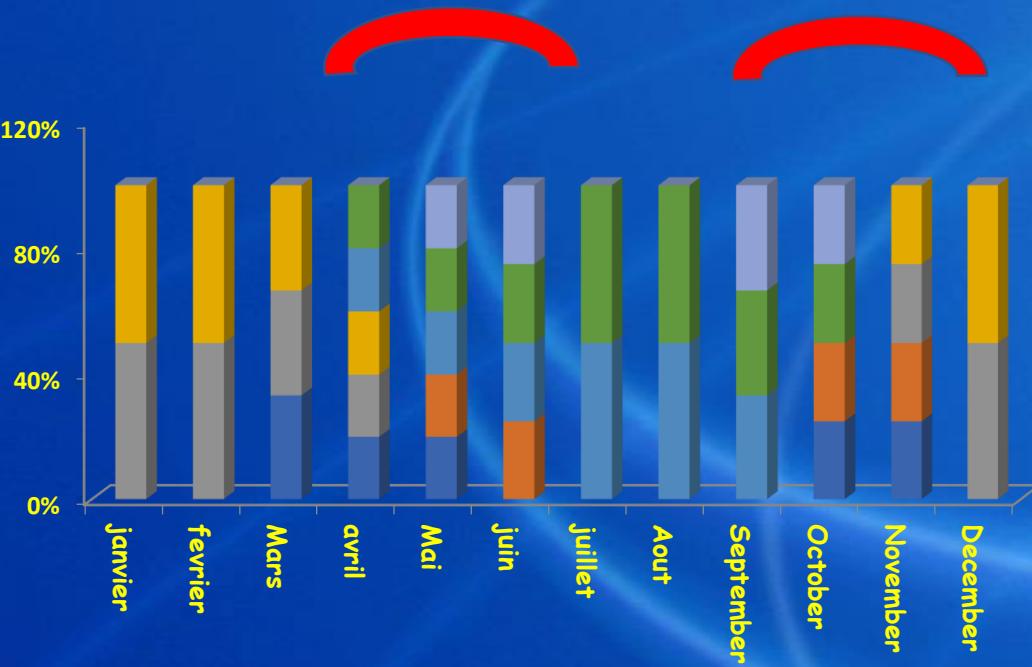

## Monthly Evolution of Mortality by famed Species

### List of the most recorded diseases in marine fish in TUNISIA (INSTM RESULTS)

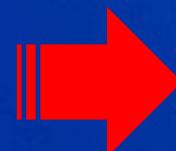

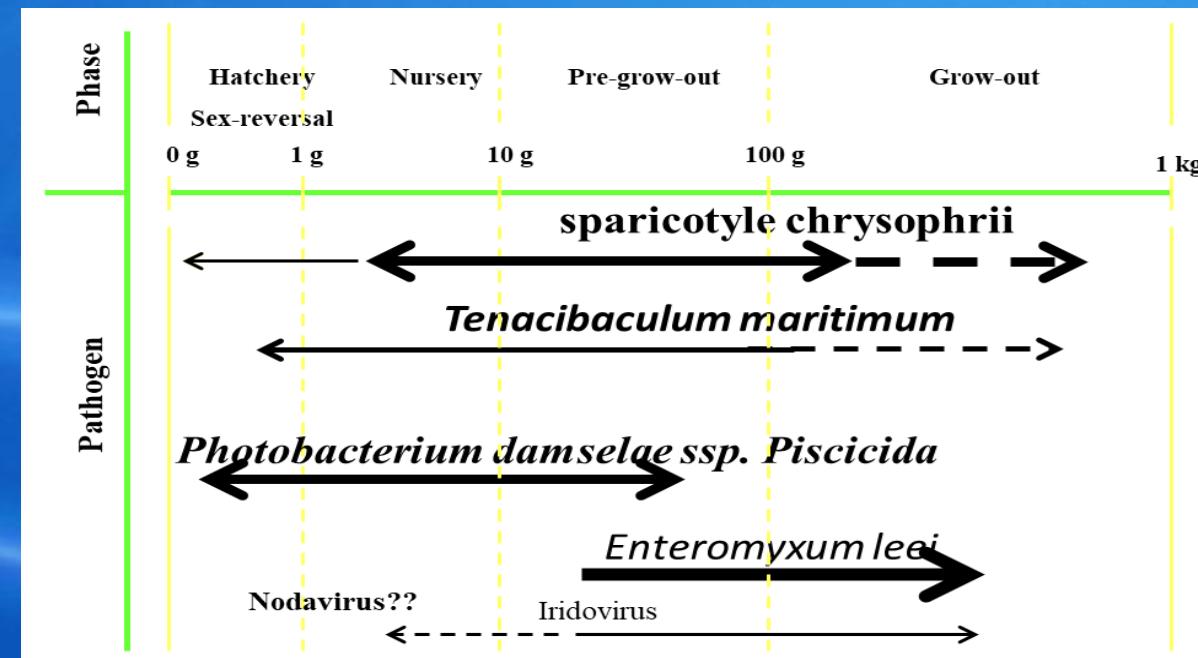

Bacterial diseases	<i>Listonella anguillarum</i> <i>Vibrio harveyi</i> <i>Vibrio alginolyticus</i> <i>Photobacterium damsela</i> <i>subsp damsela</i> <i>Photobacterium damsela</i> <i>subsp piscicida</i> <i>Tenacibaculum maritimum</i> <i>Aeromonas hydrophila</i> <i>Mycobacterium marinum</i> <i>Streptococcus iniae</i> <i>Pseudomonas anguilliseptica</i>
Parasitological diseases	<i>Sparicotyle chrysophrii</i> <i>Furnestinia echneis</i> <i>Diplectanum aequans</i> <i>Enteromyxum leei</i> <i>Ceratomyxa aurata</i> <i>Cardicola aurata</i>
Viral diseases	<i>Nodavirus, LCDV</i>
Unknown ethiology	<i>Red Rush Disease</i>

# Chronology of the appearance of infectious diseases in sea bream

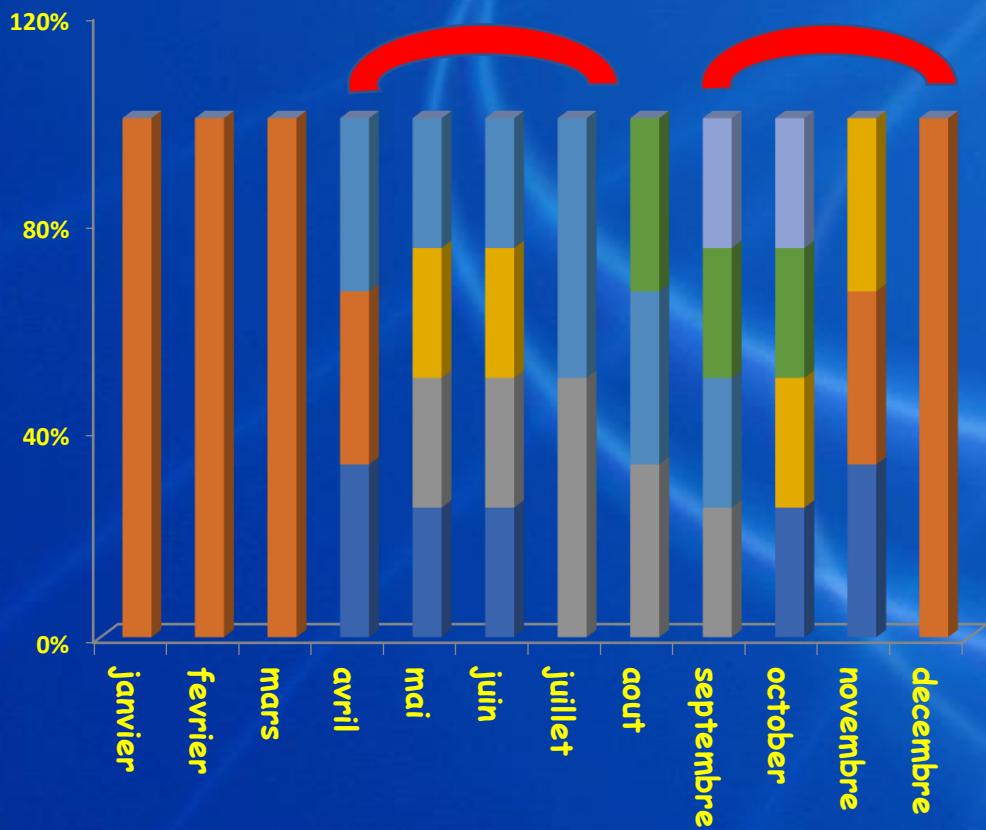

- vibrio harveyi
- vibrio alg
- Fle
- RRS
- Listo
- Photo
- spari

## Major Diseases Affecting *Sparus auarata*

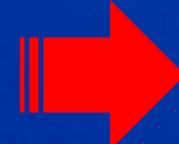

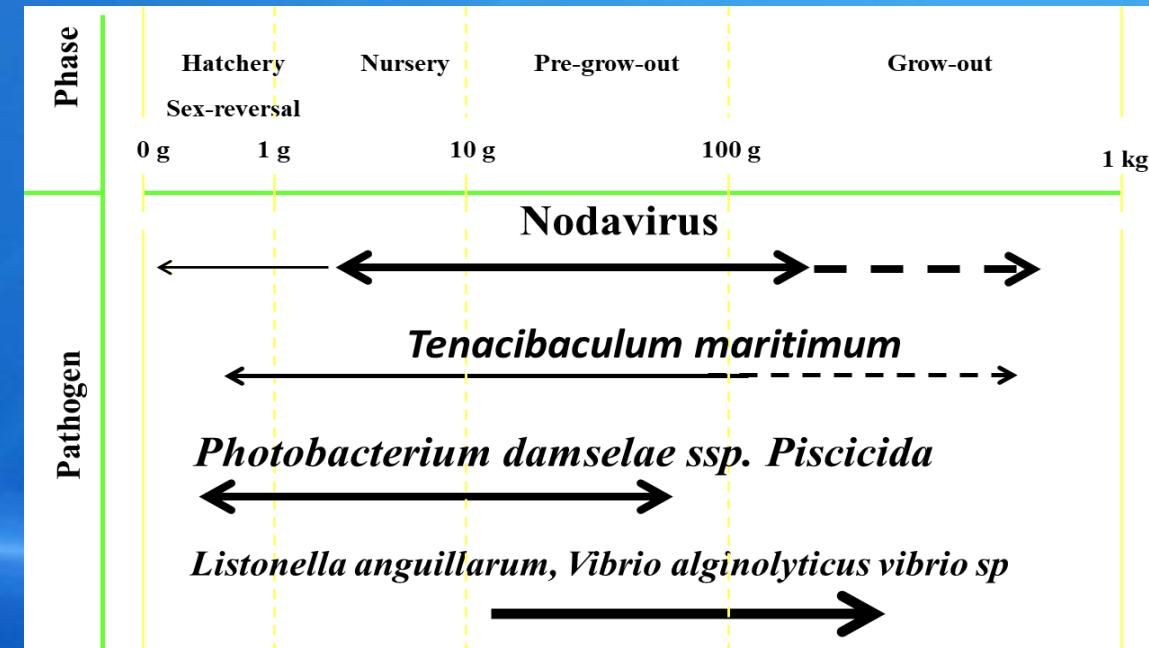

Vulnerability spread essentially during the spring and autumn period

# Chronology of the appearance of infectious diseases in sea bass

Legend:  
■ noda  
■ mycob  
■ Flex  
■ photo  
■ vib algi  
■ listo  
■ vibr har

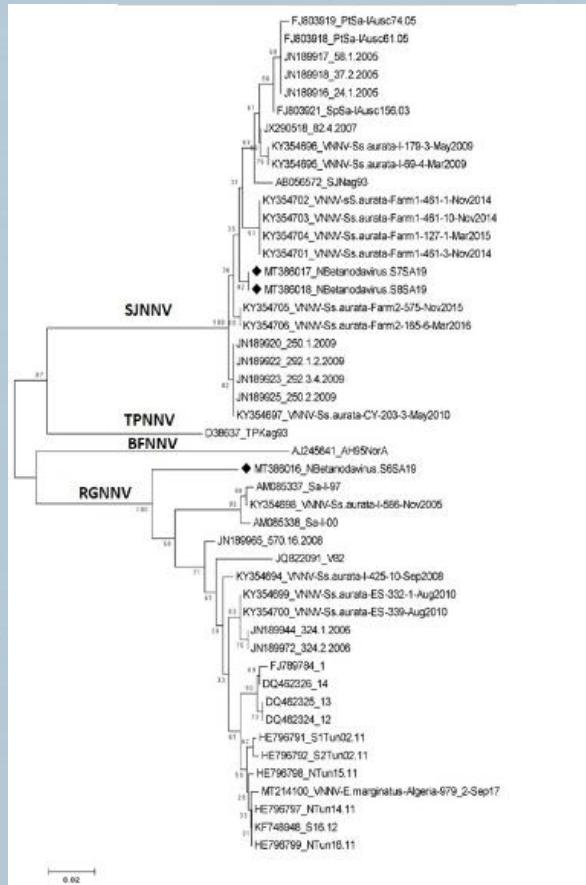

## Major Diseases Affecting *Dicentrarchus labrax*

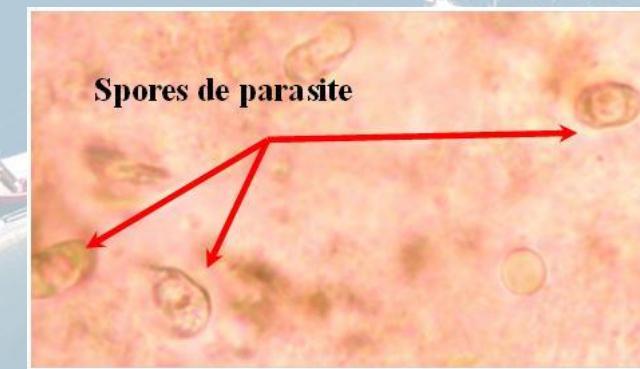

Vulnerability spread essentially during the spring and autumn period

# Recent outbreaks

2020: Nodavirus RGNN/SJNNV

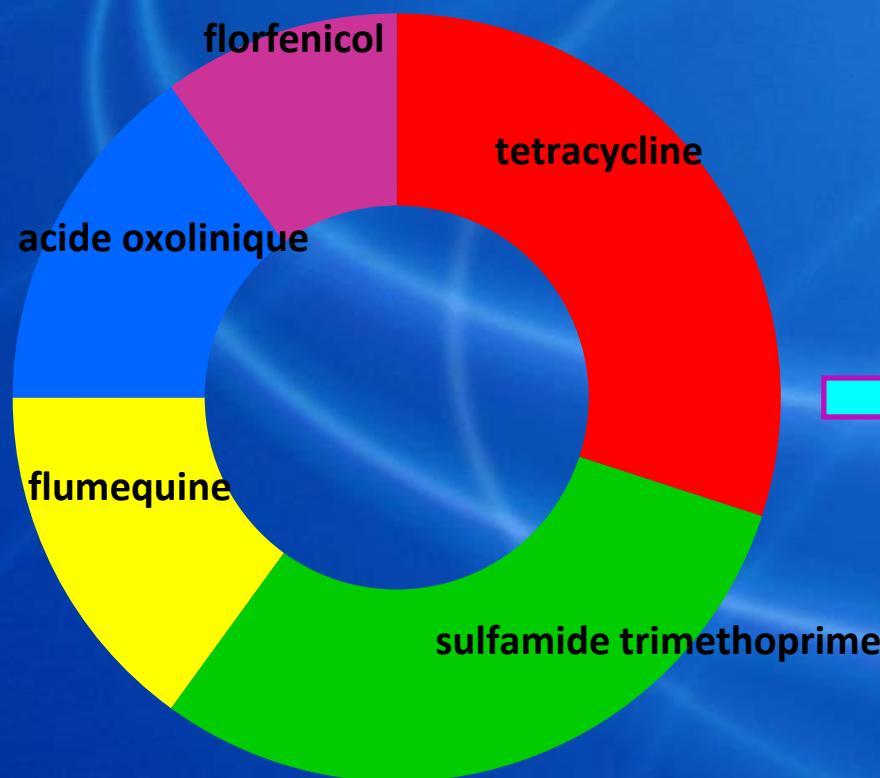

2022: Myxosporidea Henneguya sp

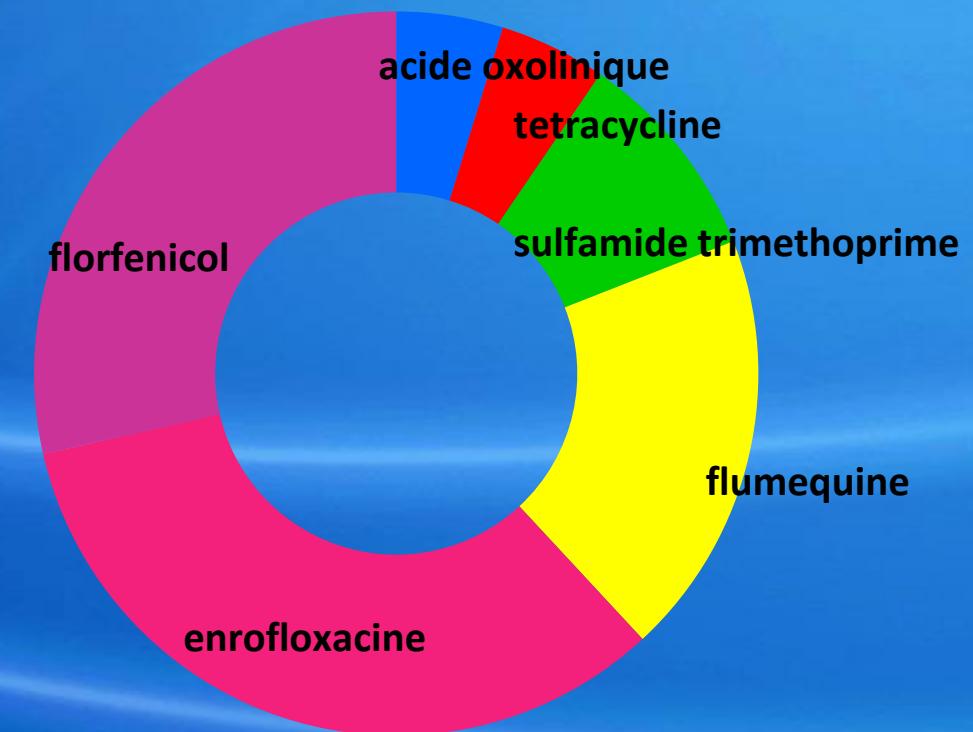

# Drug treatments.

The antibiotics used in Tunisian aquaculture sites are: oxytetracycline, Sulfonamide-trimethprim, Oxolinic acid, Flumequine, Florfenicol and Enrofloxacin

Frequencies of the main antibiotics used  
between 2010-2015

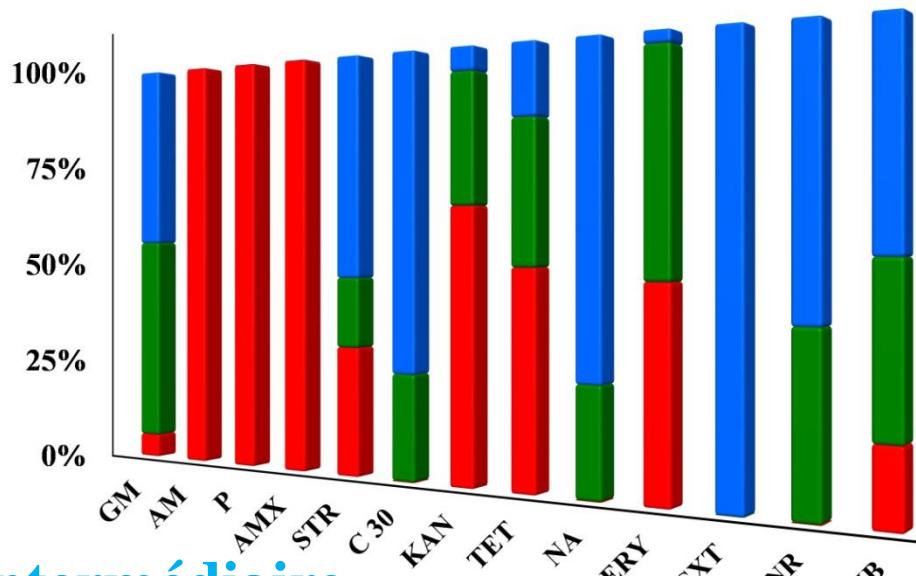

Frequencies of the main antibiotics used  
between 2016-2019

# Response of the different isolates to the antibiotics studied

POURCENTAGE

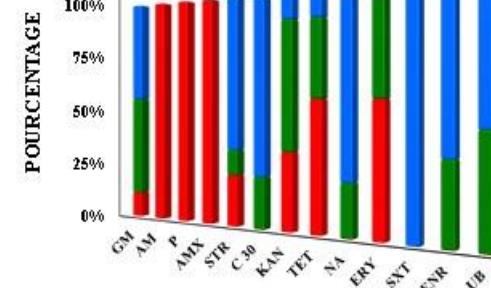

Intermédiaire

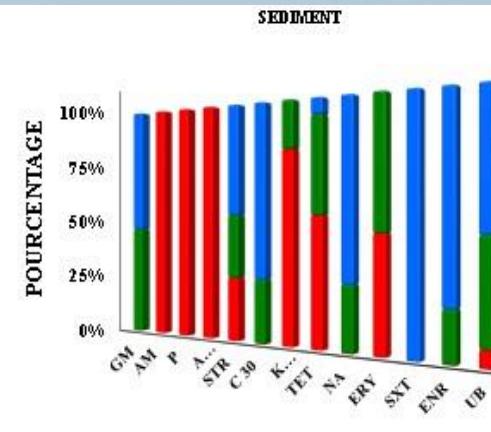

Résistance

Sensibilité

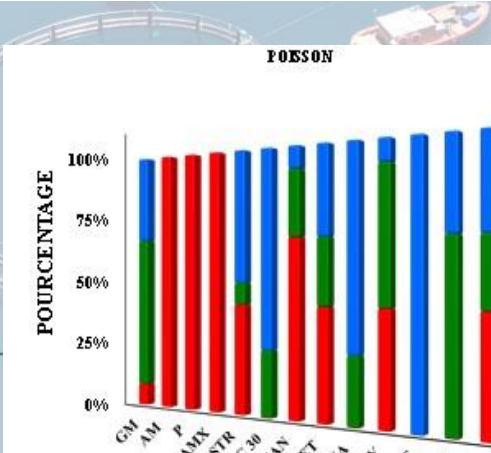

39% resistance; 23% intermediate resistance and 36% sensitivity(at the level of all matrices studied) FISH: 49% resistance; 19% intermediate resistance and 32% sensitivity WATER 39% resistance; 23% intermediate resistance and 27% sensitivity, SEDIMENT 41% resistance; 23% intermediate resistance and 34% sensitivity

FISH

WATER

POISSON

SEDIMENT

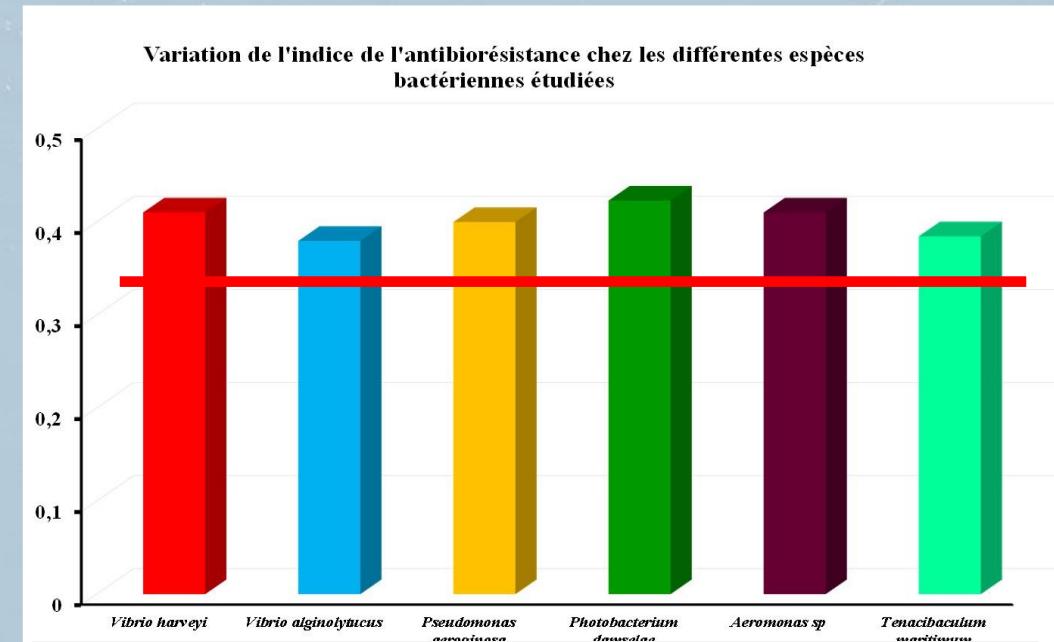

AFRICAN BUREAU  
FISH RESOURCES

## Treatment effectiveness: Correlation circle between the different antibiotics studied

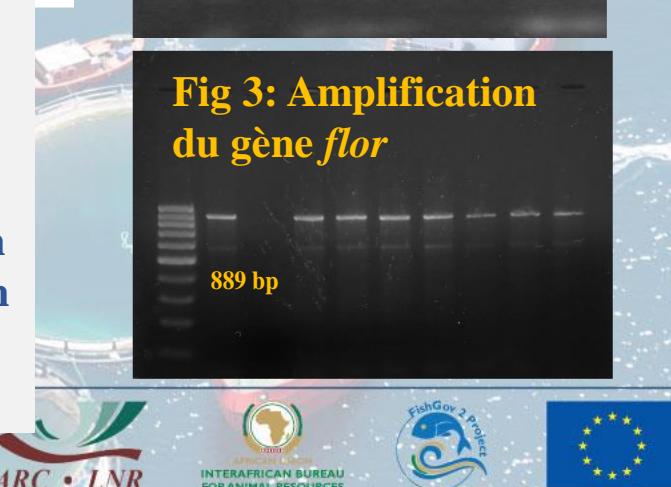

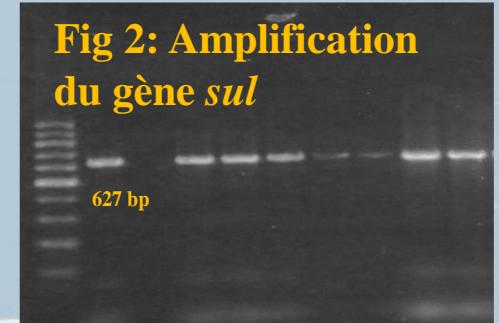

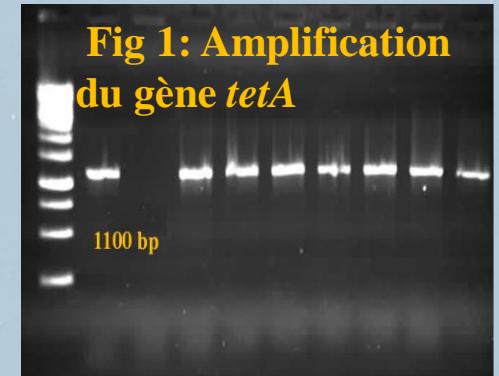

### Which antibiotic to recommend?

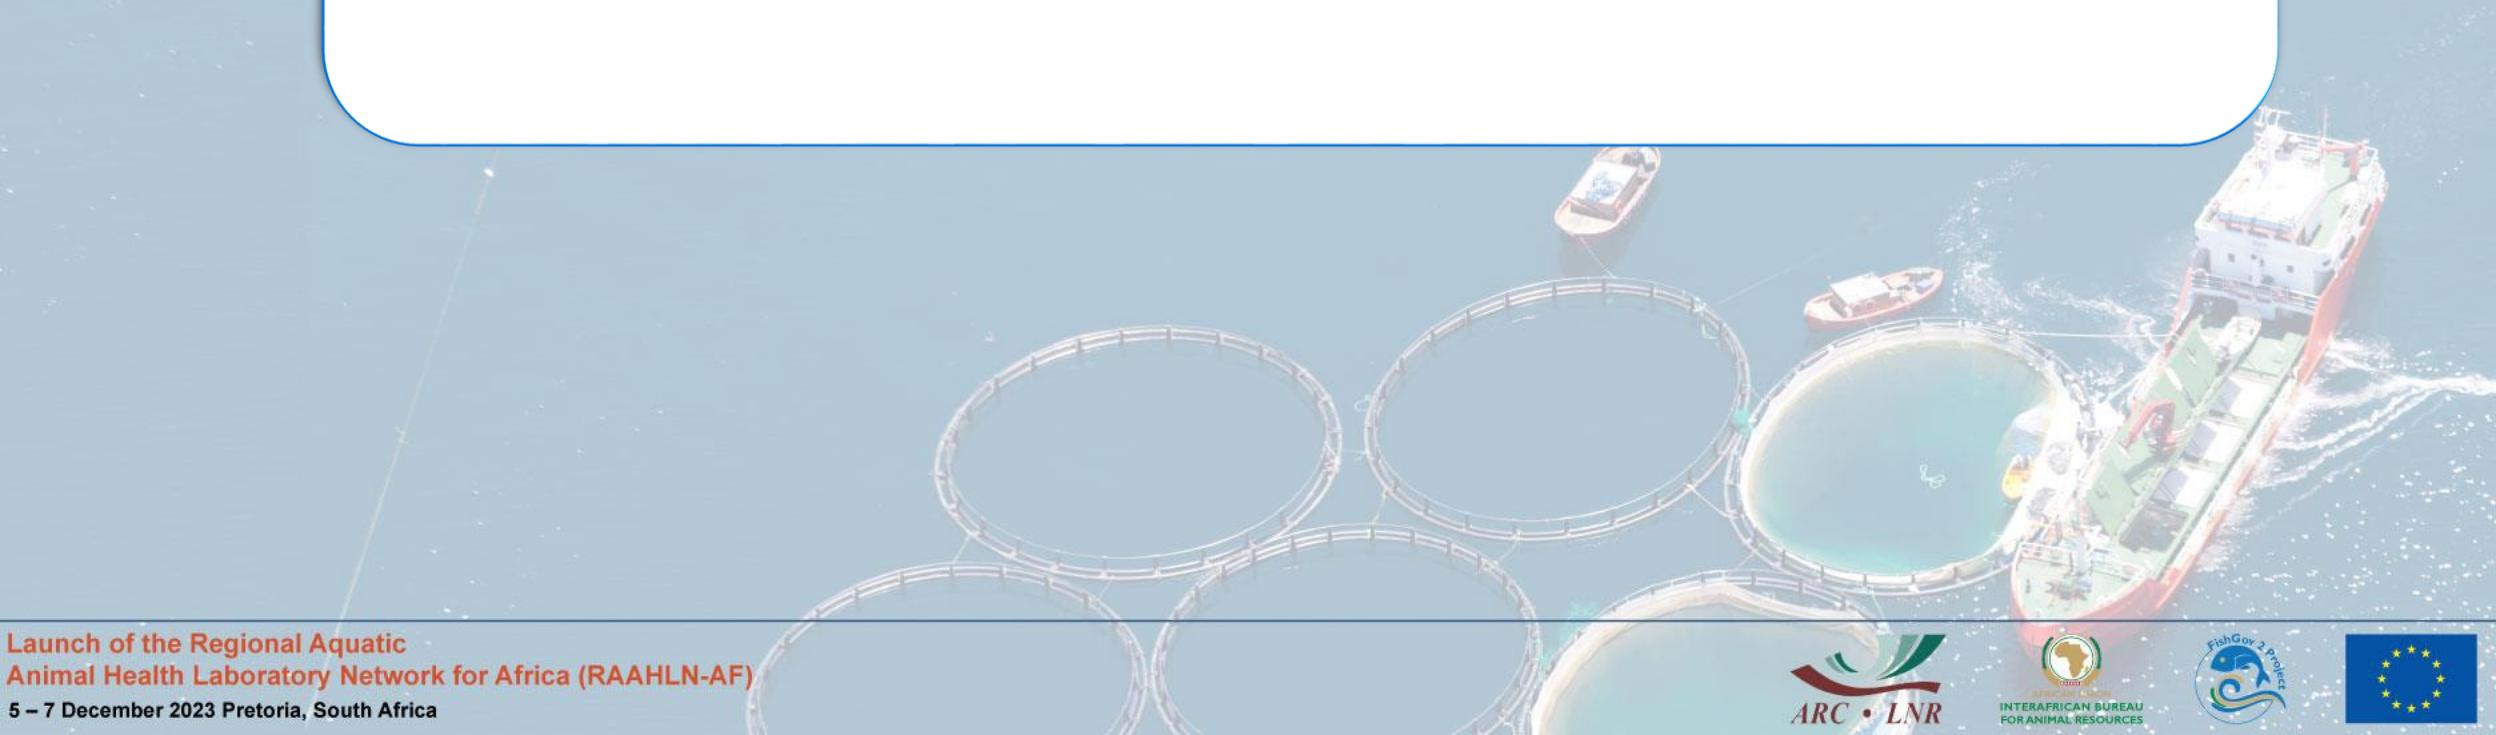

The principal component analysis explains 44.6% of the variability, however we notice a similar effect between Erythro, Strepto, and amoxicilin. As well as between enroflox and flumequine, (tetra, sulfam and nalidixic acid (when treating with these antibiotics)

The hierarchical classification of the response of the different strains to the antibiotics tested does not show a related particularity to the species which can be explained By the MAR (Multi Antibiotic Resistance index) (average) which is similar between the different species and in the majority greater than 0.35 Demonstrating that bacterial species have been exposed to antibiotic treatment in their life cycle

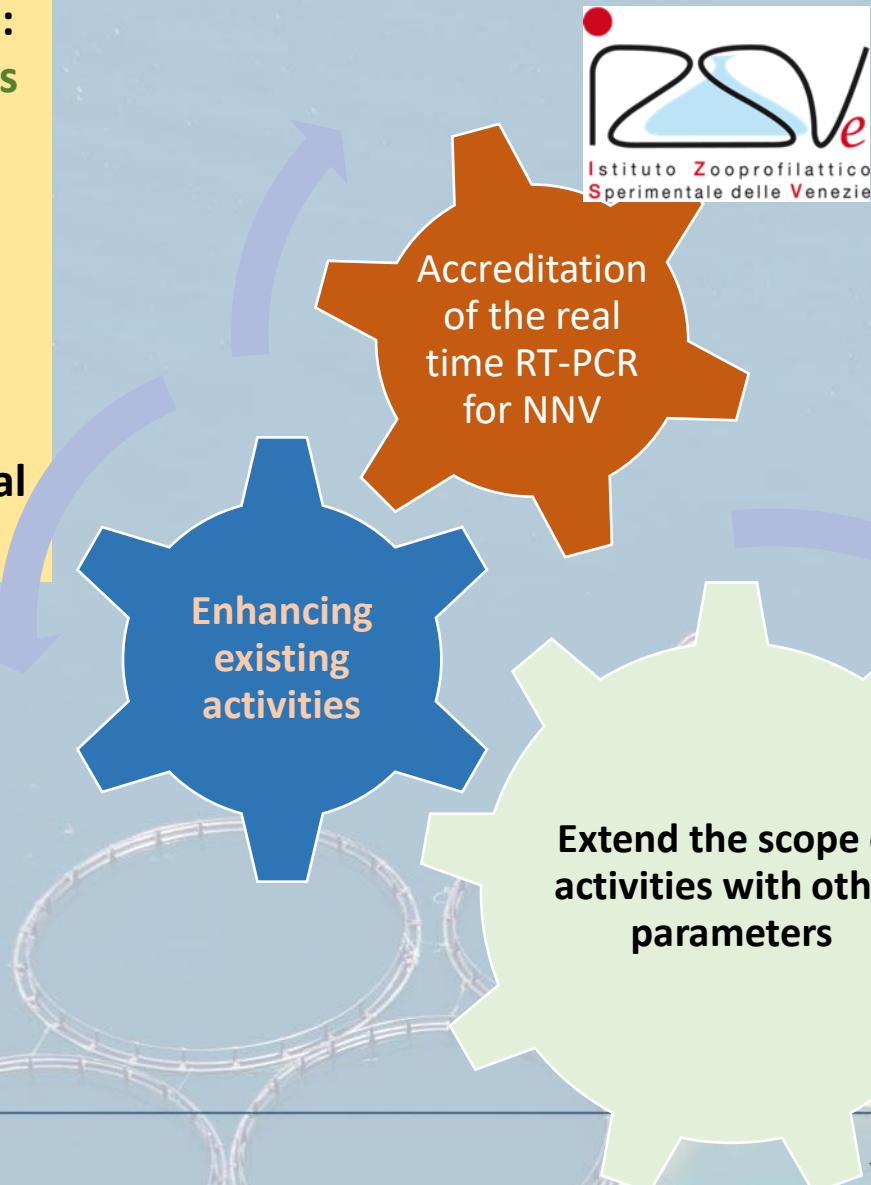

## 3- NEXT STEPS AND CHALLENGES

Diagnostic is a continuous and lasting action:  
**Engagement of the CA and other stakeholders**  
**Lack of communication between structure**  
**Sustainable funding source (autocontrols, int. agencies, Gov,...)**  
**Few PERMANENT qualified human resources**

There is a need to establish a National AAH diagnostic center within INSTM organizational chart

AQUAE STRENGHT  
STRENGTHENING  
CAPACITY ON AQUATIC  
ANIMAL HEALTH AND  
EPIDEMIOLOGICAL  
SURVEILLANCE

Vaccines  
Biosensor (nodavirus, TiLV)

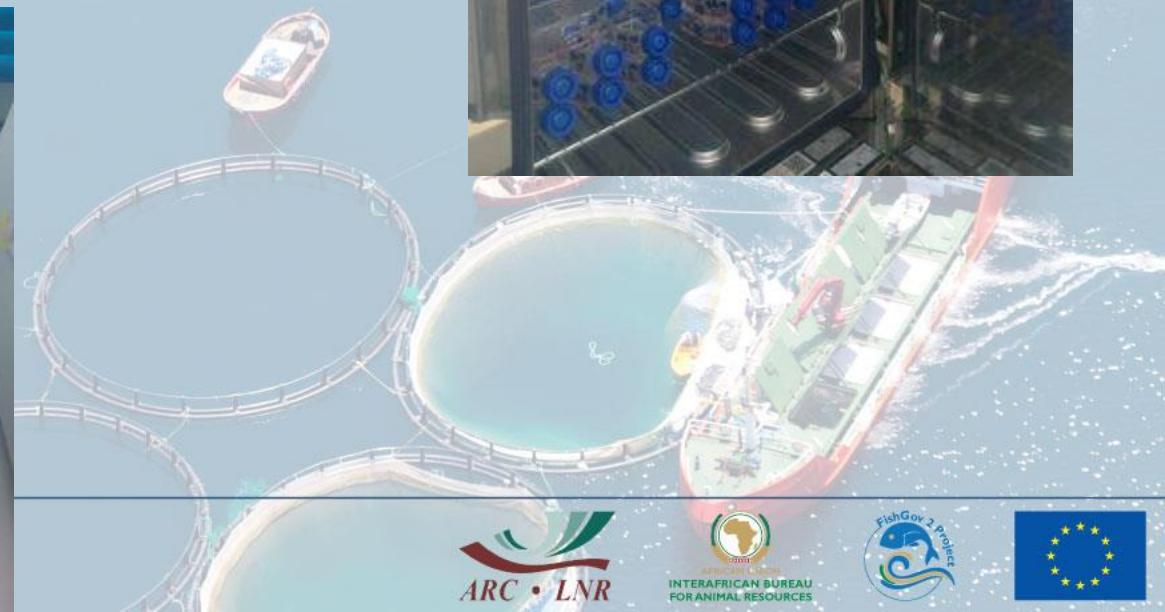

## Laboratory upgrade

### Cell culture unit – Viral isolation

### ELISA- Monitoring of broodstock

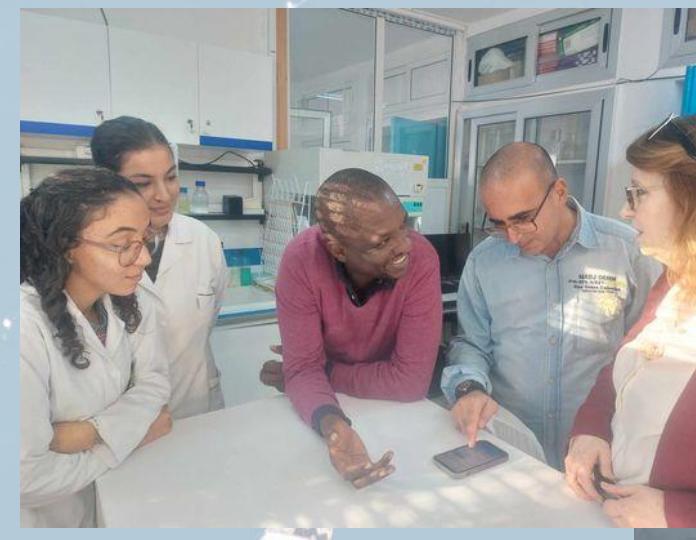

## Toward ISO 17025 (2017)

The accreditation of the real time RT-PCR for NNV

Implementation of basics for a quality system management

## Enhancing Building Capacities Activities

Launch of the Regional Aquatic  
Animal Health Laboratory Network for Africa (RAAHLN-AF)

5 - 7 December 2023 Pretoria, South Africa

*Thank you for your Attention*
