

HARNESSING THE ENGAGEMENT OF VETERINARY SERVICES WITH PRIVATE SECTOR FOR COLLECTIVE ACTION AGAINST DOG-MEDIATED RABIES IN AFRICA

Dr. Nick Lang'at

National Executive Committee Member, Kenya Veterinary Association

OCT Act Now: You, Me, Community

Title: Bridging the Public and Private Veterinary Workforce to Strengthen Rabies Elimination in Africa

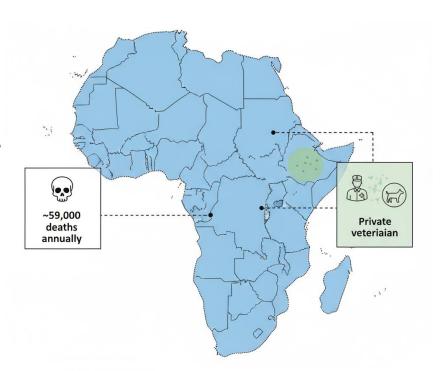

The Challenge: Rabies Burden & Workforce Gaps in Africa

- •A Deadly Burden: Rabies kills an estimated 59,000 people every year, with the majority of deaths occurring in Africa.
- •An Ambitious Goal: The "Zero by 30" goal aims to end human deaths from dog-mediated rabies by 2030, but this requires a massive collective effort
- •The Workforce Gap: Public veterinary services alone cannot reach all communities to achieve the necessary vaccination coverage. Meanwhile, private vets and paraprofessionals play a critical but underutilized role in community health.

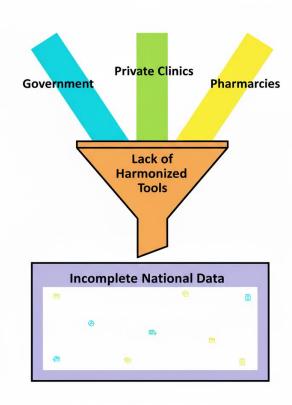

The Core Problem: A Fragmented Data System

- •Siloed Efforts: Efforts between government and private practitioners are fragmented.
- •Invisible Data: Vaccinations performed in private clinics are not captured in national totals.
- Pharmacies (Agrovets) and paraprofessionals sell vaccines without a centralised reporting mechanism.
- •The Consequence: The lack of harmonized tools for data aggregation leads to a critical gap in rabies data, hindering effective planning and response

A Collaborative Solution: The KVA-UoN CEMA Initiative

- •A Strategic Partnership: The Kenya Veterinary Association (KVA) and the University of Nairobi's Centre for Epidemiological Modelling and Analysis (CEMA) have launched a joint initiative.
- •Developing a Digital System: The project is creating a unified digital platform for private clinics, pharmacies, and paraprofessionals to report their activities.
- •The Goal: Users input data on medicines sold and vaccinations given to create a real-time, central repository for rabies and veterinary data. This will complement an already existing Government of Kenya data collection system

Why It Matters: Benefits of a Unified System

Better Strategy

Enables evidencebased decision decision-meaiking for national vacination campaigns and improves improves resource allocation

Improved Surveillance

Helps track dog
vaccination
coverage and strengthens
outtreak response

Increased Visibillity

Formaly recognizes the private sector's contribution to public health

A Scalable Model

Provides a template for for strentheting One he Health public-privitepartnerships acrass across Africa

Achieve "Zero by 30": Our Action Plan

Call to Action & The Path Forward

We must implement joint reporting systems to integrate public and private veterinary data

Invest in Digital Tools

We need to support and deploy accessible digital platfoms that that make data collection seamless

Strengthen Collaborations

We should foster and repliacte powerful partnerships like like the KVA-UoN CEMA initiative

Together, we can achieve Zero by 30 ACT NOW: You, me, Community

Thank you!

...improving the livelihoods of Kenyans
