Founded as OIE

## The Global FMD Control Strategy (2012-2027)

To reduce the burden of FMD, FAO and WOAHA developed a 15-year **Global FMD Control Strategy**, endorsed by representatives from more than 100 countries and international and regional partners in 2012.

The GF-TADs **FMD Working Group**, composed of 7 FMD experts from FAO, WOAHA and EuFMD, is responsible to coordinate efforts to implement the Strategy towards the **long-term vision of FMD control**.

The **Progressive Control Pathway for FMD** (PCP-FMD) is one tool of the Global Strategy. It is a **risk and evidence-based framework** to guide endemic countries to progressively improve the management of FMD risks and reduce disease impacts and viral circulation.

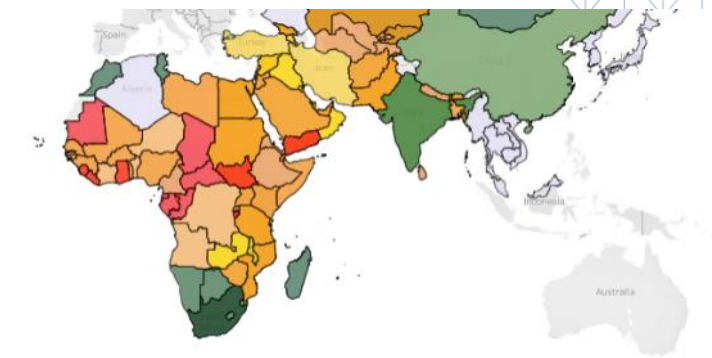

## FMD Roadmap platforms and objectives

**7 regional FMD roadmap platforms - 5 in Africa - have been established.**

**FMD Roadmap meetings allow**

- sharing of information,
- improved understanding of PCP-FMD principles and application,
- periodic review and assessment of progress in FMD control at country and regional levels,
- identification of areas for improvement and needs for assistance,
- election of FMD Regional Advisory Groups, and
- discussion around the regional Epidemiology and Laboratory networks' activities.

## FMD Roadmap meetings since last RSC meeting for Africa

	West Africa Roadmap	Middle East Roadmap	Eastern Africa Roadmap
Chairperson	Rep. de Côte d'Ivoire (CVO)	United Arab Emirates (CVO)	Rwanda (CVO)
CVO member of the RAG	Burkina Faso and Mali (CVOs)	Jordan and Oman (CVOs)	Djibouti and Sudan (CVOs)
Epidemiology Network Leader	Ghana (RESEPI)	Egypt (Epi MENET)	Ethiopia (EAREN)
Laboratory network Leader	Ghana (RESOLAB)	Egypt (Lab menet)	Kenya (EARLN)

In these Roadmaps, **Regional Advisory Groups (RAGs)** were renewed.

RAGs provide leadership in the Regional Roadmaps

- Provide coordination and identify regional needs for training and support
- Responsible for acceptance of countries in new PCP-FMD Stages

### Regional Advisory Group (RAG)

Three Chief Veterinary Officers/ OIE Delegates	Heads of regional epidemiology and laboratory network	(non-voting) FAO/OIE officers Experts Representative of Regional organization

## Recent recommendations across Africa RMMs

Each RMM agrees on a set of recommendations, formulated for the countries; networks; technical partners; and supporting global and regional organisations

Recommendations common across RMMs are:

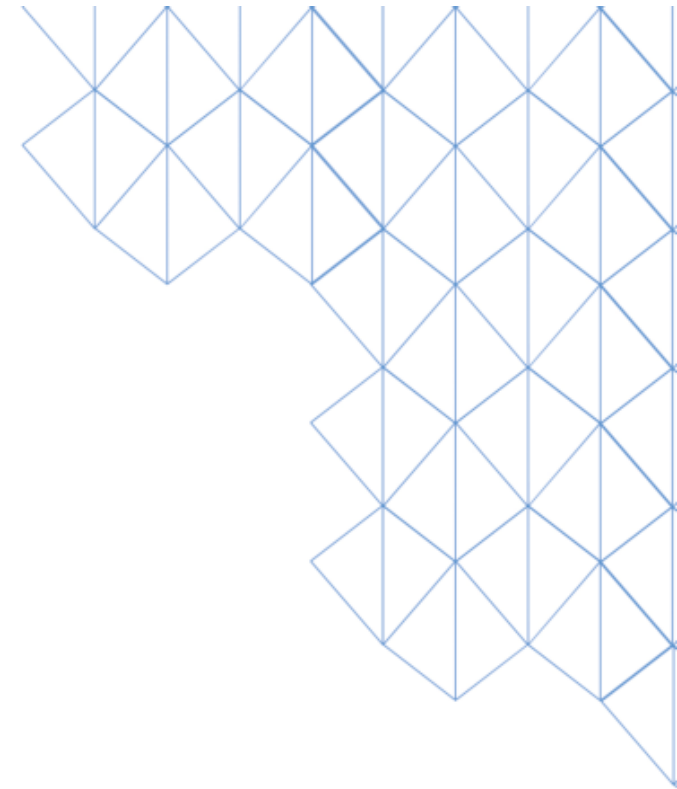

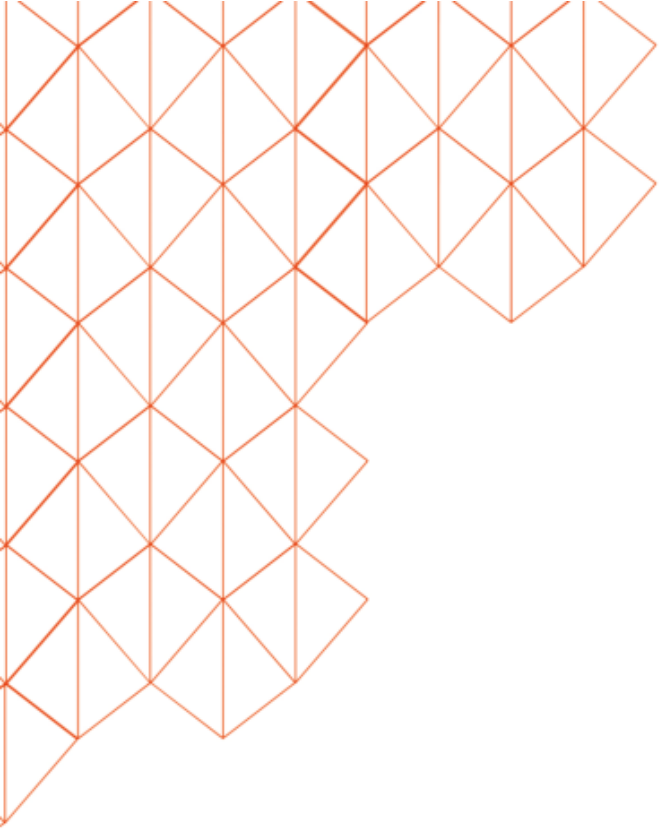

- Improved **identification and access to appropriate vaccine**
- Support to **sample shipment** for FMDV characterization
- Support to **regional Animal Health Networks (epi and lab)** and empowerment of their members
- Support to **plan/programme development**
- **Training** of official & private vets on disease recognition, investigation and reporting
- Improved **coordination mechanisms** between countries
- Promotion of **public–private partnership**
- **Advocacy for FMD control at the highest political level**

## Challenges to be faced – how to overcome?

Worrying transboundary spread of specific lineages into new areas requires emergency response:

- O/EA-2 (SADC)
- O/EA-3 (North Africa)
  
- Lack of coordination between countries
  - Could be helped by regional strategy and/or MOUs
- Under-reporting and delays in reporting
- Gaps in virological surveillance
  - very important to ensure vaccine is appropriate and for early detection of new serotypes/strains
- Limited assessment of vaccine and vaccination effectiveness
- Lack of consistent political commitment for FMD control

Thanks for your attention
